DETAILED ACTION

Applicant's election without traverse of Invention IV, Claims 16-18 in the paper received August 18, 2003 is acknowledged. It is acknowledged that applicant's have cancelled Claims 1-16 and 19-23 and added Claims 24 and 25. Claims 16-18, 24, and 25 are pending. Claims 24 and 25 are deemed to be within the elected invention. Claims 16-18, 24, and 25 are hereby examined on their merits.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

For the Claims:

1 - 15 (canceled).

16 (currently amended). A method to detect test compound modulation of proteolytic activity comprising the steps:

a) incubating a test compound, the proteolytically active protease of SEQ ID NO: 2, and a labeled substrate for sufficient time to produce a detectable product as a result of proteolytic activity upon the labeled substrate; and

b) measuring a change in the quantity of product as a result of test compound modulation of said protease activity on the labeled substrate, when compared to protease activity on the labeled substrate in the absence of test compound.

17 (previously presented). The method of claim 16 wherein the labeled substrate

Art Unit: 1652

comprises a detectable label selected from the group consisting of a radiolabeled atom, at least one fluorescent molecule, and a colorimetric molecule.

18 (original). The method of claim 17 wherein the substrate is labeled with two fluorescent molecules, and the detectable molecule is detected by fluorescent resonant energy transfer.

19-24 (canceled).

25 (amended). A method to detect test compound modulation of proteolytic activity comprising the steps:

a) incubating a test compound, a proteolytically active fusion as set forth by SEQ ID NO: 9, and a labeled substrate for sufficient time to produce a detectable product as a result of proteolytic activity upon the labeled substrate; and

b) measuring a change in the quantity of product as a result of test compound modulation of said protease activity on the labeled substrate, when compared to protease activity on the labeled substrate in the absence of test compound.

Authorization for this examiner's amendment was given in a telephone interview with Linda Evans on December 4, 2003.

Allowable Subject Matter

Claims 16-18 and 25 are allowed.

The following is an examiner's statement of reasons for allowance:

All elected Claims, 16-18 and 25, are limited to methods for detecting test compound modulation of the proteolytic activity of the protease of SEQ ID NO: 2 or the catalytic domain thereof in a fusion protein, SEQ ID NO: 9.

Art Unit: 1652

The utility of said method, detecting test compound modulation of the proteolytic activity of the protease of SEQ ID NO: 2, is credible based on expression in heterologous host cells and analysis by an enzymatic assay using a variety of synthetic substrates (Table 1). Testing the effect of a test compound to modulate said proteolytic activity could be accomplished by adding the test compound to the reactions described by Table 1. Such techniques are standard in the art; however, the claimed methods would not have been obvious to a person of ordinary skill in the art to one of skill in the art as the prior art fails to teach or suggest a protease of SEQ ID NO: 2 or 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
